

World War 1 (WW1) in Cork Harbour

During WW1, the British Naval headquarters at Queenstown (the name given to Cobh from 1849 to 1923) covered the critical sea area from the Sound of Mull in Scotland to Ushant in France. The Royal Navy and later the United States Navy set up anti-submarine patrols from Cork Harbour to protect this area. This effort became crucial during Germany's unrestricted underwater warfare

campaign in 1917-1918. The force based in Cobh consisted of 1200-ton sloops with trawlers, drifters, destroyers, motor launches and submarines, to

which were later added minesweepers and disguised armed merchant ships known as 'Q' (for Queenstown) ships. The lower harbour area could be illuminated at night using searchlights located at all of the forts.

Prior to 1941 there were four British military coastal defence forts protecting the harbour: Fort Templebreedy and Fort Camden on the western side; Fort Carlisle on the eastern side and Fort Westmoreland located on Spike Island in the inner harbour. In addition, other facilities existed within and around the harbour and all of these combined to make Cork Harbour an important asset in the ultimate allied victory in the Great War, 1914 - 1918.

Getting to Cork Harbour

Dedication

The development of the WW1 Cork Harbour Heritage Trail is due to the wonderful vision of the late Cllr Claire Cullinane. She was a great advocate for the heritage potential on a national and international basis of the whole of Cork Harbour and she first proposed and promoted the idea of this trail.
